P1. Complex survey treated as simple random sample
P2. Routine indicator without relevant data-quality/denominator checks
P3. Storage type dictates analysis
P4. DHS weight/coded-value semantics mishandled
P5. Summary statistic poorly matched
P6. Threshold/effect-scale/reporting overclaim
P7. Data-dependent assumption-pretest method selection
P8. Multiple testing / undisclosed multiplicity
P9. Ecological fallacy / level-of-inference mismatch
P10. Adjustment-set / causal-interpretation problem
P11. Immortal-time / reverse-causation problem
